2017 GLOBAL PLATFORM
FOR DISASTER RISK REDUCTION

Global Partnership on Disaster-related Statistics

NSOs called for establishment of a **Global Partnership on Disaster-related Statistics** at the World Data Forum 2017 in Cape Town.

Overall objectives:

- Support Member States' reporting on Sendai Framework and SDG Indicators
- Establish long-term partnerships between National Statistical Offices, national sectoral ministries / disaster risk management / technical institutions, International Organizations and relevant technical partners
- Respond to the instructions of Member States:
  - Open-ended Intergovernmental Expert Working Group on Indicators and Terminology for Disaster Risk Reduction - A/RES/71/276
  - Inter-agency and Expert Group on SDGs Indicators - E/CN.3/2017/2*

UNISDR United Nations Office for Disaster Risk Reduction

UNITED NATIONS ESCAP Economic and Social Commission for Asia and the Pacific

UNECE

CES Task Force on measuring Extreme Events and Disasters

Substantive chapters of the *Recommendations to National Statistical Offices for measuring extreme events and disasters*

- Scope and conceptual understanding of Extreme Events and Disaster-related Statistics
- Defining the role of National Statistical Offices
- Statistical tools for EED-related statistics
  - Surveys
  - Registers
  - Big data
  - **Geospatial information (GEO leading this work package)**
- Conclusions: recommendations to NSOs
- Proposed follow up work
- Glossary of important terms

GROUP ON EARTH OBSERVATIONS

EO4SDGs

The 2030 Plan for Global Action - Article 76:

"We will promote transparent and accountable scaling-up of appropriate public-private cooperation to exploit the contribution to be made by a wide range of data, including Earth observation and geo-spatial information, while ensuring national ownership in supporting and tracking progress."

→ **Direct measures of some *Indicators* and indirect support to others.**

→ **Contribute to progress on the *Targets*, which will show up in the Indicators.**

GROUP ON EARTH OBSERVATIONS

GEO support for SDGs

SUSTAINABLE DEVELOPMENT GOALS

Target (Contribute to progress on the Target yet not the Indicator per se)								Goal	Indicator (Direct measure or Indirect support)				
							1.5	1 No poverty					
					2.3	2.4	2.c	2 Zero hunger	2.4.1				
				3.3	3.4	3.9	3.d	3 Good health and well-being	3.9.1				
								4 Quality education					
								5 Gender equality	5.9.1				
		6.3	6.4	6.5	6.6	6.a	6.b	6 Clean water and sanitation	6.3.2	6.4.2	6.5.1	6.6.1	
				7.2	7.3	7.a	7.b	7 Affordable and clean energy	7.1.1				
							8.4	8 Decent work and economic growth					
				9.1	9.4	9.5	9.a	9 Industry, innovation and infrastructure	9.1.1				
								10 Reduced inequalities					
	11.3	11.4	11.5	11.6	11.7	11.b	11.c	11 Sustainable cities and communities	11.3.1	11.6.2	11.7.1		
					12.2	12.a	12.b	12 Responsible consumption and production					
					13.1	13.3	13.b	13 Climate action	13.1.1				
	14.1	14.2	14.3	14.4	14.6	14.7	14.a	14 Life below water	14.3.1				
15.1	15.2	15.3	15.4	15.5	15.7	15.8	15.9	15 Life on land	15.1.1	15.2.1	15.3.1	15.4.1	15.4.2
								16 Peace, justice and strong institutions					
			17.6	17.7	17.9	17.16	17.17	17 Partnerships for the goals					

Work closely with UN-GGIM.

GEO represented on Inter-Agency Expert Group (IAEG) of the UN Statistics Division.

GEO is the Earth Observation Anchor Partner to the Global Partnership for Sustainable Development Data (GPSDD).

GROUP ON EARTH OBSERVATIONS

THE GLOBAL GOALS For Sustainable Development

Sustainable Development Goals

- Multiple applications of land cover and land cover change exist to **evaluate progress** towards various SDG targets;
- Usefulness of land cover information for the **implementation** of the SDGs is being recognized.

GROUP ON EARTH OBSERVATIONS

EO4SDGs

Purpose

1) Progress the Targets
2) Support the Indicators
3) Relevance for Land Cover

Water-related ecosystems

6.6 By 2020, **protect and restore water-related ecosystems**, including mountains, forests, wetlands, rivers, aquifers and lakes

- **Indicator 6.6.1 Change in the extent of water-related ecosystems over time (Tier III, Custodian agency: UNEP, Other: UN-Water, IUCN)**

- Land cover datasets can be used to detect changes over time in the extent of wetlands, forests and drylands;
- GEO is referred to in the stakeholder comments as an institution to collaborate with regarding the collection of data (GEOSS);
- Several satellite-based datasets are proposed for the detection of the percentage change in extent of freshwater systems, e.g. derived from Sentinel-2 or Landsat data.

Urbanization

11.3 By 2030, **enhance inclusive and sustainable urbanization** and capacity for participatory, integrated and sustainable human settlement planning and management in all countries

- **Indicator 11.3.1 Ratio of land consumption rate to population growth rate (Tier II, Potential Custodian agency: UN-Habitat, Other: UNEP)**

- The value of satellite-based EO data to monitor land cover change is acknowledged in the stakeholder comments.
- UNEP proposed to contribute to this indicator through work with GEO-GEOSS on land conversion.

Land degradation

15.3 By 2030, combat desertification, restore degraded land and soil, including land affected by desertification, drought and floods, and strive to achieve a **land degradation-neutral world**

- Indicator 15.3.1 Percentage of land that is degraded over total land area (**Tier III, Potential Custodian agency: UNCCD, Other: FAO, UNEP)**
- Proposed sub-indicators:
  - Land cover
  - Land productivity
  - Soil organic carbon
- According to UNCCD “land cover and land cover change have multiple applications for evaluating progress towards various SDG targets and give a first indication of land degradation”

Multilateral Environmental Agreements

Convention on Biological Diversity

- 4 Aichi Targets relate to land cover

Ramsar

- Targets 5, 6 and 12 can be informed by land cover

UNCCD

- Focuses on attaining Land Degradation Neutrality and SDG Target 15.3

Climate

- Land Cover is an Essential Climate Variable (ECV)
- Global-scale wall-to-wall land use products allowing change analysis, are needed by climate modelers, mitigation and adaptation communities

- Parties must submit annual national GHG inventories including estimates of anthropogenic emissions and removals in the land use, land use change and forestry sector

- Six broad land use categories in the 2006 IPCC Guidelines for National Greenhouse Gas Inventories
- Basis for estimating and reporting greenhouse gas emissions and removals from land use and land use conversions

GEO Plenary 2016 outcomes

- Growing demand and expectations
  - Use of LC information in legally binding situations (e.g. reporting) requires high accuracy, accountability, transparency and reliability
- Need for more levels of classification and types of input data sources
  - Multi-level classification legends, data fusion, integration of socio-economic data, more sources of remote sensing data
- New technologies and approaches
  - Data cube, separation of preprocessing and classification, single-class approach, fusing local and regional maps into global datasets
- Land Cover Portal
  - Increased access to land cover datasets and services
- Varied user needs
  - No single map fits all purposes, need for more dialogue

GEO Work Programme

SB-02: Global Land Cover → **CA-01**: Land Cover & Land Cover Change

New emphasis on:

- **Regional and national products**
  - Limited use of global maps at regional/national level
  - Most decisions take place at the national level
- **Land Cover Change**
  - Users articulated the importance of land cover change

→ *Plan to evolve into a GEO Initiative*

Land cover & land change

Goals:

- Informing policy initiatives, such as the Sustainable Development Goals and at the national level
- Operational systems for LC products that meet the varied needs of users, including those at the global, regional, national, and sub-national levels
- Easy access to existing LC and LCC information, including making it easier for users to find the data that best meets their needs

Leadership:

GROUP ON EARTH OBSERVATIONS

Steps towards the goals

- Generate LC products by utilizing recent advancements in science and technology
- Develop a coordinated LC reference database
- Develop shared tools to facilitate validation of LC datasets and that help standardize accuracy assessments
- Establish a community-oriented global LC portal and a collaborative information service platform

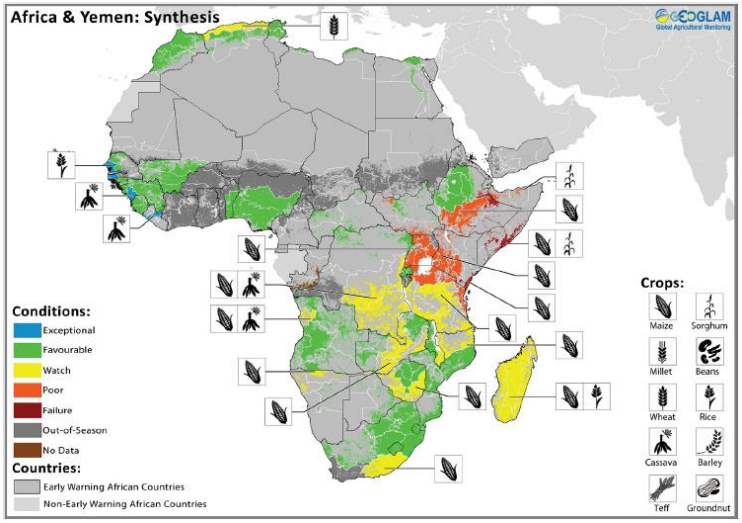
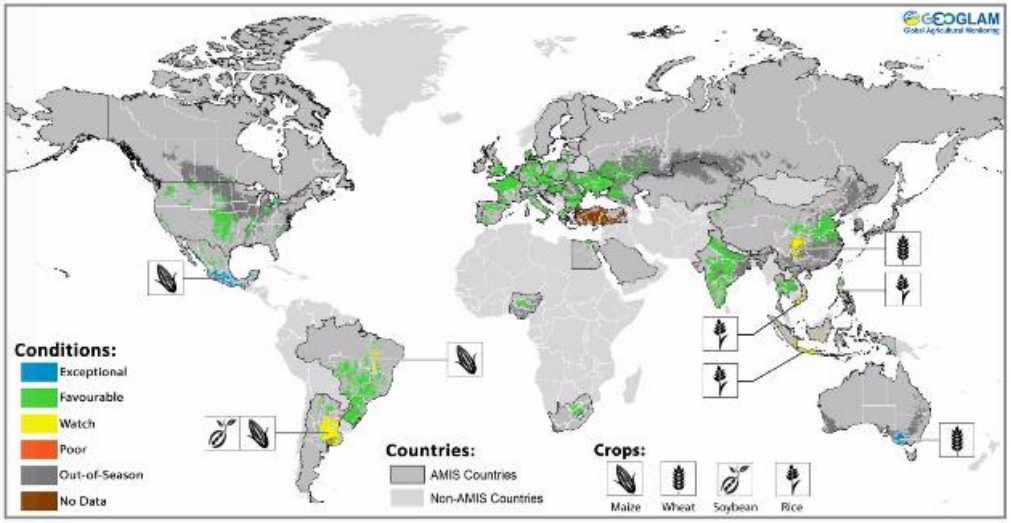
GEO GLAM – leveraging Earth observations for a food-secure world

Crop monitor for Early Warning



Crop monitor for AMIS

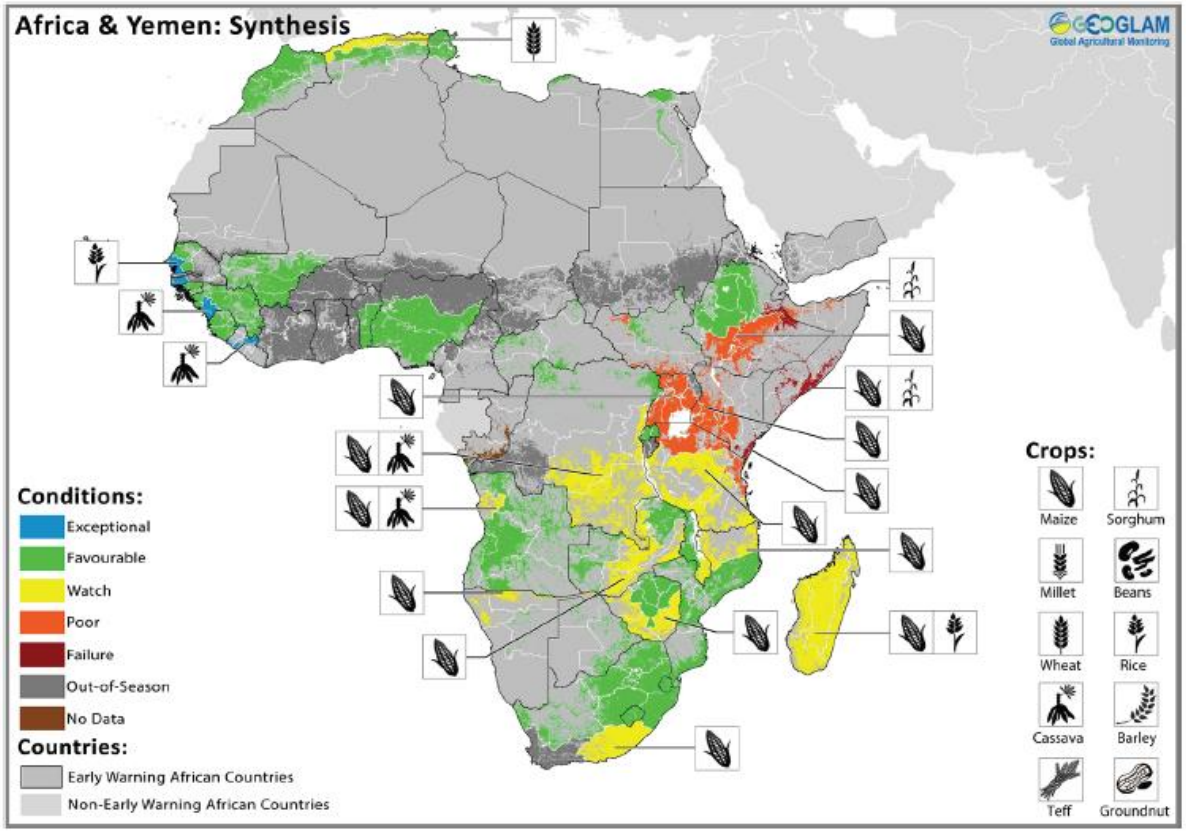


Crop condition map synthesizing information for all four AMIS crops as of January 28th. Crop conditions over the main growing areas for wheat, maize, rice, and soybean are based on a combination of national and regional crop analyst inputs along with earth observation data. ***Crops that are in other than favourable conditions are displayed on the map with their crop symbol.***

GROUP ON EARTH OBSERVATIONS

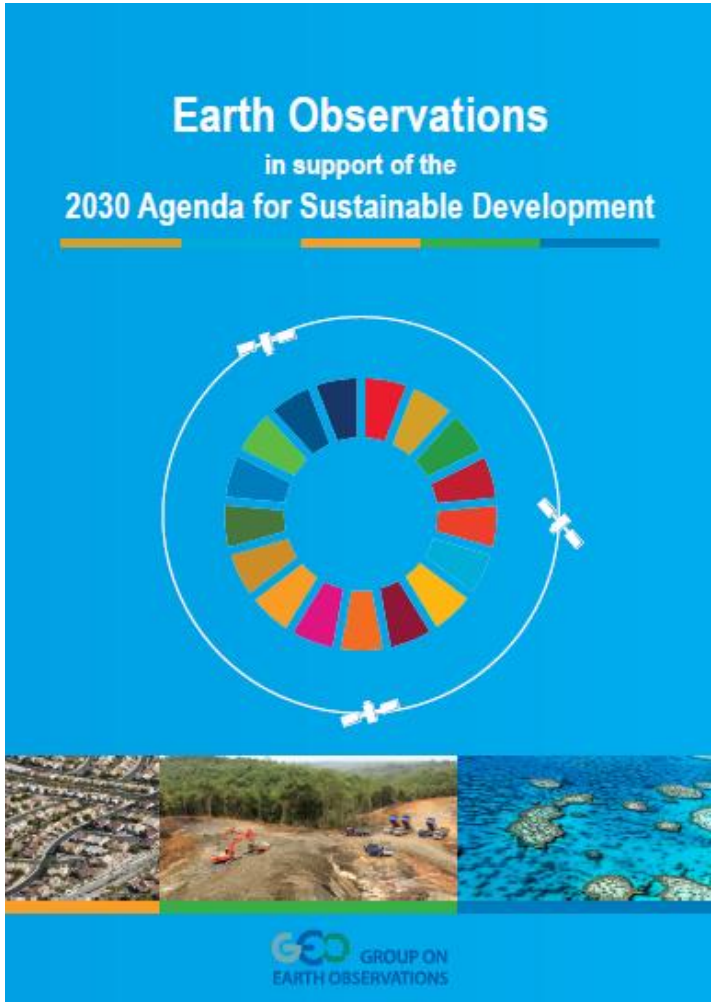
2.c	Adopt measures to ensure the proper functioning of food commodity markets and their derivatives and facilitate timely access to market information, including on food reserves, in order to help limit extreme food price volatility.

GEOGLAM can also support other Targets (2.1, 2.4, 2.a, 2.3) and other Goals (12 and 13, with Indicators 12.3 and 13.3).



Crop Monitor for Early Warning: Crop Conditions in Africa and Yemen as of 28 January 2017. Areas which are in other-than-favourable conditions are shown with the affected crop.

EO case studies: Agenda 2030



GEO is instrumental in integrating use of Earth observation data into the methodology of measuring and achieving Sustainable Development Goal Indicators.

This brochure gives graphic illustration of the types of EO data sets and images available which means decision-makers can not only use data to identify the status they need to report, they can visualize the solution, too.

News

New Zealand Government thanks ChinaGEOSS, CODATA and IRDR for their help following 2016 Kaikoura Earthquake.

New Zealand was hit by a 7.8 magnitude earthquake in Kaikoura in November 2016, and the government has expressed thanks to ChinaGEOSS, CODATA and IRDR for their timely and free provision of satellite data that helped with damage and loss estimation following the disaster.

Damage and loss estimation is often difficult in the hours and days after a natural disaster as data and information are not available. During the Kaikoura earthquake, IRDR's Disaster Loss DATA project and the CODATA Task Group Linked Open Data for Global Disaster Risk Research (LODGD) worked together with environmental and engineering consulancy Tonkin +Taylor in New Zealand to provide TripleSat , Jilin-1A and FY satellite images of the affected Hurunui District.

As both the technical manager of ChinaGEOSS Portal and a member of CODATA LODGD Task Group, Professor Li Guoqing organized the above emergency response data sharing activity under the leadership of China GEO Office.
