Strengthening the Global Data Ecosystem

ECOSOC Resolution 2016/27

- Acknowledged the considerable achievements and progress made by the Committee of Experts in the area of global geospatial information management, its contribution to the strengthening of geospatial information management capacities and utilization in developing countries, and recognized the relevance of geospatial information for the various United Nations policy agendas.
- Stressed the need to strengthen the coordination and coherence of global geospatial information management, in capacity-building, norm-setting, data collection, dissemination and sharing, among others, through appropriate coordination mechanisms, including in the broader United Nations system, building on the work of the Committee.
- Item on the Council's agenda changed from 'Cartography' to 'Geospatial information, and *invited the Committee to report on all matters relating to geography, geospatial information and related topics; and to report back to the Council within five years on the implementation of the present resolution.*

The Past, Present and Future of WEARABLE TECHNOLOGY

Technology and society are driving digital transformation, but are we yet leveraging this new '*data ecosystem*' effectively?

Robotics

Do we really understand the scale of the problems,
where they are, whom they impact, what are the causes,
and how they can be remedied?

**Do we have the data for development??
Can we make it 'production ready' information for all?**

GLOBAL DEVELOPMENT POLICY FRAMEWORK

The 2030 Agenda for Sustainable Development

**Sendai Framework
for Disaster Risk
Reduction 2015-2030**

**SIDS Accelerated
Modalities of Action
(SAMOA) Pathway**

Paris Agreement on Climate Change

HABITAT III
Urban Agenda

How does Digital Transformation

enable the 'data ecosystem'

to achieve Sustainable Development?

How do we bridge the Digital Divide?

2030 Agenda: Goals, targets, indicators

Addressing the data needs for the 2030 Agenda

Addressing the data needs for the 2030 Agenda

- The scope of the 2030 Agenda requires high-quality and disaggregated data that are timely, open, accessible, understandable and easy to use for a large range of users, including for decision making at all levels.
- There is a need for a reporting system on the SDGs that would have benefit from the sub-national (local) to the national level; and allow for global reporting that builds directly on the data shared by countries.
- Important to create an opportunity for countries to directly contribute to the global reporting. While the challenges are immense, the digital technology that is available today allows the necessary transformation.
- An aspiration is to strengthen countries' national geospatial and statistical information systems to facilitate and enable a '***data ecosystem***' that leverages an accessible, integrative and interoperable local to global system-of-systems.

Strengthening the Global Data Ecosystem

UN-GGIM: 2011-2016 - Develop the global understanding of geospatial information

UN-GGIM: 2017-2021 - Coordination, coherence and implementation

- Facilitate the strengthening and normative capacity building of global geospatial information management in support of the implementation of the 2030 Agenda.
- Efforts include promoting the use of geospatial information systems and services for modern mapping; methodological development; national and regional capacity-building; standards-setting; data collection, dissemination and sharing; and better integration of geospatial and statistical information systems for Member States.
- Regional Commissions provide relevant support, upon request and as appropriate, to the work of the regional committees of UN-GGIM, and that the outcomes and benefits of the activities be equally disseminated to all Member States in each region.

Strengthening the Global Data Ecosystem

UN-GGIM: 2017-2021 - Coordination, coherence and implementation

1. Maturity: Moving from “GGIM 1.0 to GGIM 2.0” - determining our value proposition to ECOSOC in the next 2-3 year horizon.
2. Strategy and roadmap on the ECOSOC resolution and how we implement the new and strengthened mandate.
3. A new Strategic Plan for UN-GGIM that considers 2020 and beyond in 5 year time steps.
4. Raising more awareness, including political, of UN-GGIM and connecting the political - technical levels within Member States.
5. Connecting more to the activities of the regional committees, Regional Commissions, and relevant statistical bodies.
6. Ensuring effective coordination and linkages across global/regional Expert & Working Groups.
7. Seek extra-budgetary and funding options, including ways of implementation.
8. More capacity development for countries in next 5 years - developing guides, standards, methods and norms.

Strengthening the Global Data Ecosystem

2017-2021 Strategic Framework

CONTEXT	VISION	<i>Positioning geospatial information to address global challenges</i>				
	MISSION	<i>Operating within agreed policies and institutional arrangements, and as an interconnected global community of practice, the Committee of Experts will ensure that geospatial information and resources are coordinated, maintained, accessible, and able to be used effectively and efficiently by Member States and society to address key global challenges in a timely manner</i>				
	MANDATED STRATEGIC OBJECTIVES	Provide leadership in setting the agenda for the development of global geospatial information and to promote its use to address key global challenges	Provide a forum for coordination and dialogue with and among Member States and relevant international organizations on enhanced cooperation	Provide a platform for the development of effective strategies to build and strengthen national capacity and capability concerning geospatial information, especially in developing countries	Propose work-plans, frameworks and guidelines to promote common principles, policies, methods, standards and mechanisms for the interoperability and use of geospatial data and services	Make joint decisions and set the direction for the production and use of geospatial information within and across national, regional and global policy frameworks

REQUIREMENTS	GLOBAL POLICY FRAMEWORK	Transforming our World: The 2030 Agenda for Sustainable Development												
		Sendai Framework for Disaster Risk Reduction 2015-2030		SIDS Accelerated Modalities of Action (SAMOA) Pathway		Addis Ababa Action Agenda	Paris Agreement on Climate Change		HABITAT III Urban Agenda					
	GEOSPATIAL CHALLENGES & DRIVERS	Environmental management		Disaster management		Sustainable development		Population						
		Urban planning		Humanitarian assistance		Food security		Education						
		Land management		Climate change		Water scarcity		Oceans & marine						
DIRECT NATIONAL BENEFITS & EFFICIENCIES	Legal & policy		Health & welfare		Poverty reduction		Sustainable cities							
	Institutional governance		Socio-economic metrics											
	• Reduced duplication of effort in the capture, management, and delivery of fundamental geospatial information • Authoritative, reliable and maintained geospatial data available nationally, regionally, and globally • Increased return on investment through better coordination, use and reuse of data, information and systems • Better evidence-based decision making, supported by good data, science and policy • More open, accountable, responsive and efficient governments • Presentation and delivery of timely and ‘fit for purpose’ data in times of need • Increased collaboration and integration of national data and information systems across all levels of government • Best practices and use cases for enriching national processes on geospatial information management													
OPERATING PRINCIPLES	Sound Nat. Policies, Legal Frameworks & Institutional Arrangements		Provision of Fundamental Authoritative Data and Information		Agreed Standards, Methods, Guides and Frameworks		Principles on Geospatial Information and Open Data		Integration and Interoperability of National Information Systems		Information Sharing and Knowledge Transfer		Building Local to Global Capacity & Capability	
DELIVERABLES	WORKING ACTIVITIES AND OUTPUTS	• Geospatial Information for Sustainable Development: 2030 Agenda, Sendai Framework, etc. • Integration of Geospatial & Statistical Information: Implement the Global Statistical Geospatial Framework • Geospatial Information and Services for Disasters: Implement Strategic Framework • Global Geodetic Reference Frame: Roadmap to Implement • Determination of global fundamental data themes • Marine geospatial information • Land administration and management • Legal and policy frameworks • National institutional arrangements • Implementation and adoption of standards for the global geospatial information community • National geospatial data and information systems												

Frameworks, guides,
norms, standards and
methodological
development

Normative strengthening,
capacity building and
implementation of GGIM
in support of the 2030 Agenda

-  Strengthening global geospatial information management
-  Contribution of regional committees, thematic groups and networks
-  Legal and policy frameworks and issues related to authoritative data
-  Trends in national institutional arrangements
-  Adoption of standards and technical specifications
-  Strengthening collaboration with UNGEGN
-  United Nations activities in geospatial information management
-  Secretariat programme management

UN-GGIM: Strengthening the Global Data Ecosystem

The activities and efforts
that contribute to the
unique local-to-global
value of UN-GGIM
for Member States

-  Global geodetic reference frame
-  Global fundamental geospatial data themes
-  Integration of geospatial, statistical and other information
-  Geospatial information and services for disasters
-  Land administration and management
-  Geospatial information for sustainable development
-  National geospatial data and information systems
-  Marine geospatial information

Strengthening the Global Data Ecosystem

Strengthening global geospatial
information management

- Strategic Framework is presented as a starting point for discussion towards a strategic plan and road map that will enable the Committee to be better supported by the regional committee architecture and the Regional Commissions.
- Continue to work on global policies for geospatial information management in tandem with producing tangible outputs such as norms, handbooks, methodologies, standards and guidelines.
- Need for closer synergies with the activities of the regional committees and working groups, Regional Commissions, and relevant statistical bodies.
- Substantively improve and strengthen the national geospatial information management capacities of developing countries towards implementing the 2030 Agenda and other global policies.

UN-GGIM

United Nations Secretariat

Positioning geospatial information to address global challenges

ggim.un.org

Strengthening the Global Data Ecosystem

National geospatial data and
information systems

- Effort by UNSD and the World Bank to explore and develop possible mechanisms for geospatial data, infrastructure and policies to be embedded more holistically within concessional financing, technical assistance and knowledge-sharing services and their subsequent implementation in developing countries.
- Recognizes the need for collaboration in developing an overarching geospatial framework that countries could reference when using geospatial information to develop national systems tailored to their own situations.
- The framework would include an action plan and road map on means for implementation, as well as elements such as the economic impact and value of geospatial information systems, investment needs and associated principles, tools, guides and good practices.

The fact is that no species has ever had such wholesale control over everything on earth, living or dead, as we now have. That lays upon us, whether we like it or not, an awesome responsibility. In our hands now lies not only our own future, but that of all other living creatures with whom we share the earth.
