UN-GGIM: Europe plenary meeting 13 and 14 October 2021

# UN-GGIM: Europe Working Group on Core Data Report and update

Clément Godin, Dominique Laurent, France

#### **Recommendation for content Core data themes state-of-play**

#### **UN-GGIM: EUROPE**

## **Working Group on Core Data**

- Core Data: priority geospatial data the most useful to analyse, achieve, or monitor the SDGs
- Objective: **Define** Core Data and **encourage** UN European MS to produce and supply them
- ⇒ 'Recommendations for Content' for 14 core themes, based on INSPIRE

Annex I Coordinate Reference Systems Geographical Grid Systems Geographical Names Administrative Units Addresses Cadastral Parcels Transport Networks Hydrography Protected Sites

<u>Annex II</u>
Elevation
Land Cover
Ortholmagery
Geology
57

#### Annex III

#### Statistical units Buildings

#### Soil

#### Land use

#### Human health and safety

Utility and governmental services Environmental monitoring facilities Production and industrial facilities Agricultural and aquaculture facilities Population distribution - demography

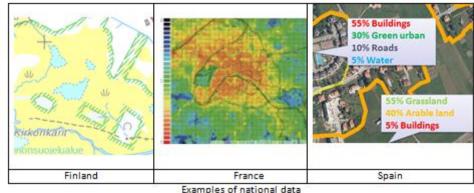

#### Area management/restriction/regulation Natural risk zones

Atmospheric conditions Meteorological geographical features Oceanographic geographical features Sea regions Bio-geographical regions Habitats and biotopes Species distribution Energy resources Mineral resources

#### **Progress since last year:** Work on 'Land Cover'

Need for

large scale data

- Various possible approaches
  - ⇒ no product-oriented recommendations
- Some common characteristics (e.g. territory partition)
- Recommendation for methodology
  - Need for agreement on national product by law or by coordination
  - Find relevant balance between requirements and feasibility

JN-GGIM: FUROPF

INFORMATION MANAGEMENT

#### Progress since last year: Work on 'Land Cover'

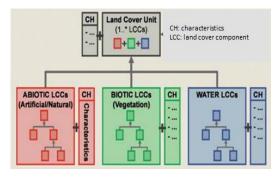

- Considerations for future
  - New production methods
    (Sentinel temporal series, VGI)
  - Combining several products or layers
    - "Interoperable" classifications (EAGLE, LCML)
    - Multi-dimensional products (LC, LU, parameters)
    - Data cube
  - ⇒ Strong need for capacity building
    - On producer side

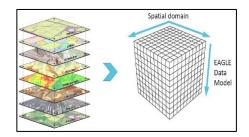

UN-GGIM: EUROPE UNITED NATIONS INITIATIVE ON GLOBAL GEOSPATIAL INFORMATION MANAGEMENT

### **Progress since last year:** Work on 'Land Use'

- Existing land use
  - Need for large scale data (as LC)
  - INSPIRE classification is good starting point
    - Adopt at least higher level (residential, primary/secondary/tertiary...)
  - Choosing main data source is key decision
    - Orthoimage is useful to get reference date
    - Cadastre enables continuous update
  - Consistency with other core data (buildings, transport)

should be ensured

### **Progress since last year:** Work on 'Land Use'

- Planned land use
  - Common code list with existing LU may be of interest
    - To enable controls
  - Similar recommendations as for 'Regulated or Managed zones'
    - Priority to valid and binding LU spatial planning
    - Main aim is digitalisation and accessibility of existing data
  - New version of LADM (with planned LU) to be investigated

#### **Global State of Progress**

Theme	Analysis	Decision making					Draft Deliverable		Consolidated Draft After WG A Review		Final Deliverable After General Review

## **Core Data Implementation**

#### **UN-GGIM: EUROPE**

#### **Document to promote Core Data implementation**

- Objectives : provide
  UN-GGIM: Europe
  Executive Committee
  - State-of-play of what has been done to promote core data
  - Ideas & recommendations
    about what might or
    should be done in future
- Currently available as Table of Content

UN-GGIM: EUROPE UNITED NATIONS INITIATIVE ON GLOBAL GEOSPATIAL INFORMATION MANAGEMENT

# **Collaborative approach**

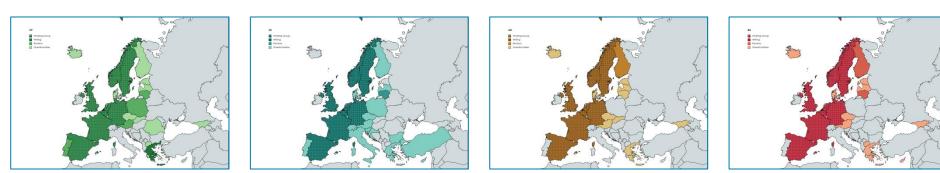

- Working Group's iterative process
  - Questionnaires
  - Review of core data deliverables by geostatistical community
- Raising interest and involvement from the community

# **Collaborative approach**

- CP, SU raised strong interest
  - Well-known and motivated community
- AD, BU as well
  - Thanks to the cadastral community

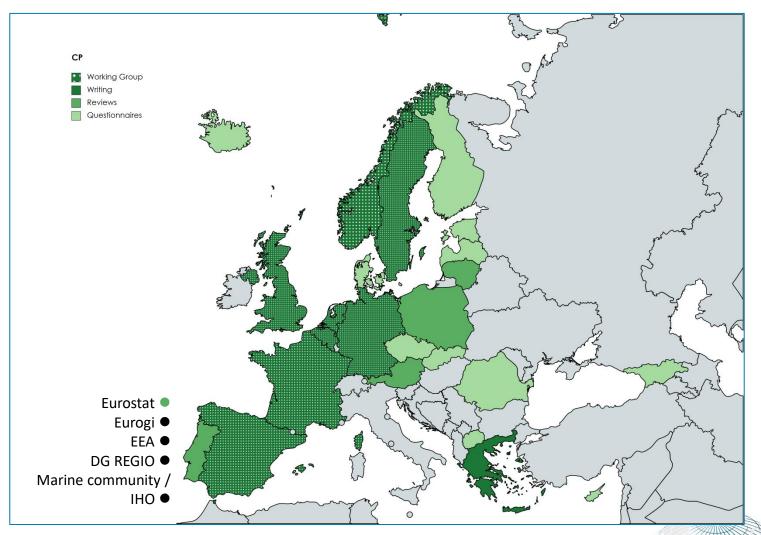

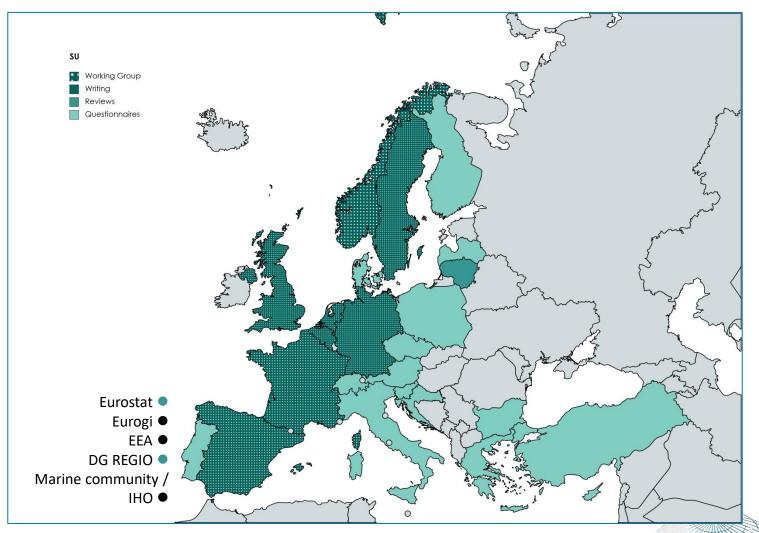

### **Cadastral Parcels**

**UN-GGIM: EUROPE** 

## **Statistical Units**

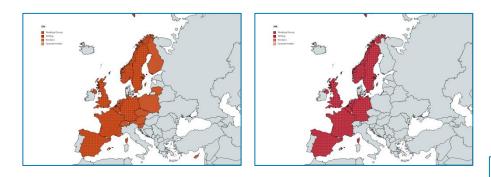

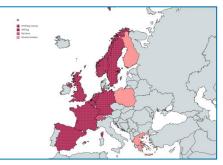

**UN-GGIM: EUROPE** 

## **Collaborative approach**

- Mixed success for others themes
  - GN vs. AM
  - EL vs. US

UN-GGIM: EUROPE UNITED NATIONS INITIATIVE ON GLOBAL GEOSPATIAL INFORMATION MANAGEMENT

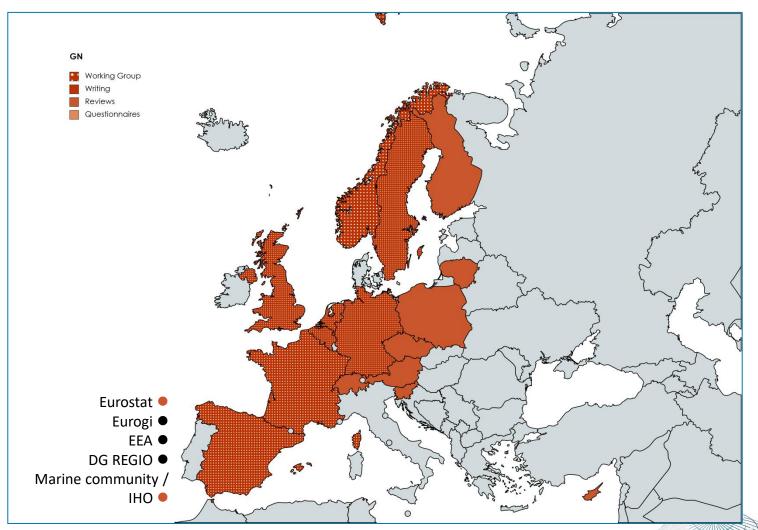

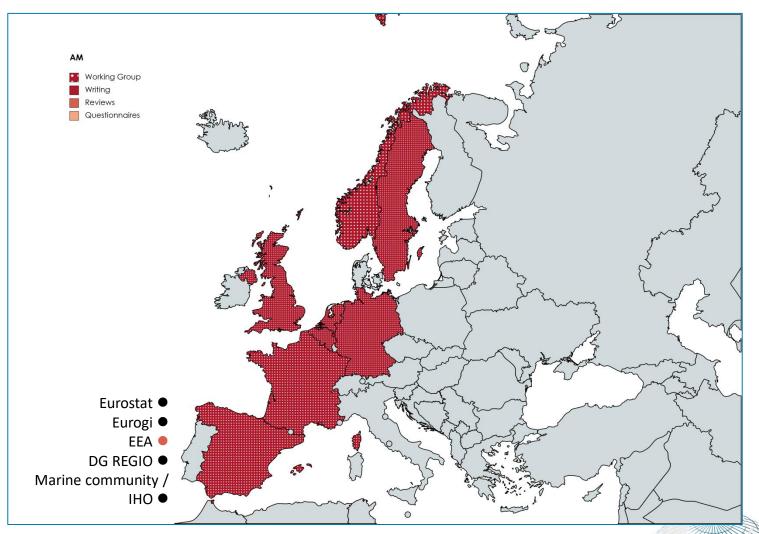

### **Geographical Names**

#### **UN-GGIM: EUROPE**

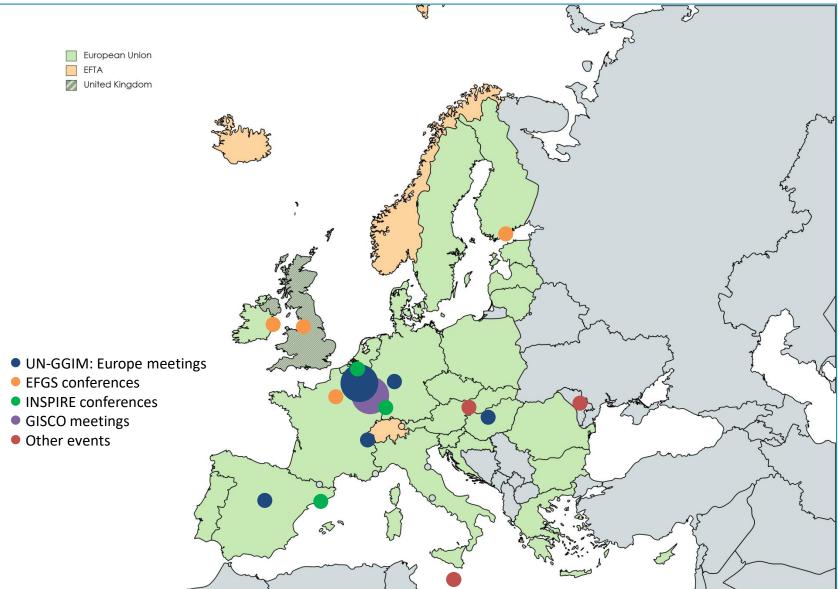

### **Area Management**

**UN-GGIM: EUROPE** 

## Communication

## **Other actions**

- Bibliography
  - Core data mentioned in other documents (mainly related to UN-GGIM)
- Interest from the European Commission
  - Priority list of core spatial datasets for core themes:
    Administrative Units, Statistical Units, Addresses,
    Cadastral Parcels, Buildings, Transport Networks,
    LPIS, Postal Codes ("Priority Geospatial Datasets for the European Commission", Eurostat, June 2018)
  - Concept of core data emerging more and more (High Value Datasets, INSPIRE...)

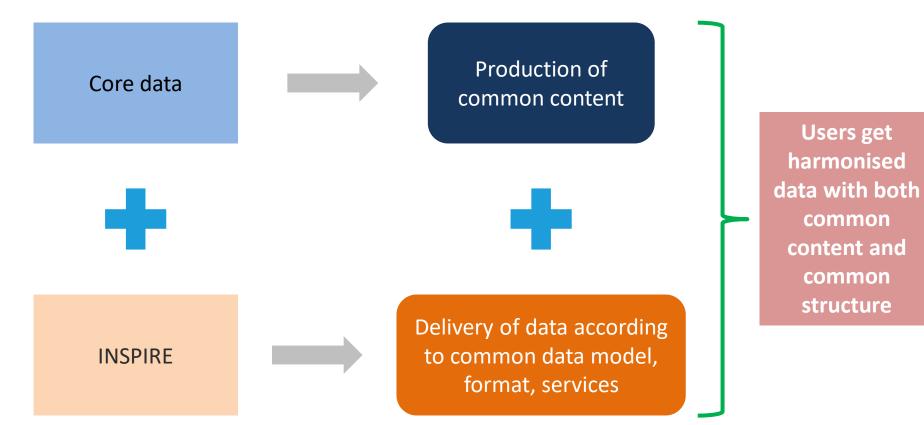

## What about future?

- Initial objective(s) of core data
  - Same SDG requirements ⇒ need for similar core data
    - Support data-driven policy at national level
  - Similar core data at national level is a good starting point for pan-European datasets

## **Core data and INSPIRE**

UN-GGIM: EUROPE UNITED NATIONS INITIATIVE ON GLOBAL GEOSPATIAL INFORMATION MANAGEMENT

## The way to pan-European datasets

- Core data (together with INSPIRE) provide a good
  framework to obtain harmonised data from MS
- But there is also a need for a more coordinated approach to implement core data
  - Member States and European Institutions jointly deciding
    - which user need(s) to be addressed as a priority
    - which core data theme(s) to be implemented as a priority
  - One interested party acting as data aggregator
- Eurostat once expressed its decision to use Core Data as

target model for its database (TBC)

# The way to pan-European datasets

- EuroGeographics' oncoming project
  - A larger scale (1:10k) datasets for key data themes
  - A **jigsaw approach**, among others, is currently investigated
    - Focussing efforts on priority user needs
    - Designing and producing data themes stepwise
  - A production workshop scheduled in November 2021
- Working Group's aim
  - Suggesting to adopt UN-GGIM: Europe Core Data as guiding
    principle for product managers and data producers

### Conclusions

#### **UN-GGIM: EUROPE**

# Conclusion

- Deliverables
  - Most Recommendations for Content of core themes close to final version (12 scheduled for mid-2022)
  - "Promoting core data implementation" under preparation
- Is it time for wider communication and awareness?
  - Outside UE and EFTA
  - Probably the case of many UN-GGIM: Europe activities
