

WEBINAR CONCEPT NOTE

WEBINAR COORDINATOR | UN-GGIM: Europe
Francisco Vala (INE Portugal)

PARTICIPATING PARTIES

WEBINAR TITLE

Showcasing the added value of geospatial and statistical data integration to compute SDG indicators

INTRODUCTION

Within the previous mandate (2019-2022), the task of the subgroup on SDG indicators was to provide **methodological**, **operational** and **technical** guidance in the use of spatial data and statistics to compute SDG indicators. The focus was on a **European** and **national perspective**, and reflecting on solutions which may contribute to reduce statistical burden and increase the level of detail of SDG indicators.

For this purpose, the subgroup considered pan-European initiatives and datasets and, based on the use cases provided by member-states, provided methodological guidance on the integration of geospatial and statistical data for SDG indicator computation addressing specifically 11.2.1, 11.3.1 15.1.1 and 15.3.1.

Special attention was given to the contribution of Earth observation (EO) using the European Copernicus programme and to environment-related SDG indicators.

The current mandate (2022-2024) aims at maintaining the active contribution of UN-GGIM: Europe on showcasing the added value of integrating geospatial data with other data to address SDG indicators, by building on the previous deliverables of UNGGIM: Europe and focus on common problems and technical and methodological solutions.

This first session is part of a larger webinars programme that aims to, first, collect the needs and requirements within the work done by the different groups, initiatives, stakeholders in Europe or globally; and secondly to define the relevant SDG indicators, requirements and cross-cutting issues to be addressed in the current mandate.

OBJECTIVES

This webinar will present the main outcome and findings of the previous mandate (2019-2022) dealing with the SDG analysis and calculation of the four following indicators

- 11.2.1 'Proportion of population that has convenient access to public transport',
- 11.3.1 'Land consumption rate to population growth rate',
- 15.1.1 'Forest area as a proportion of total land area' and
- 15.3.1 'Proportion of land that is degraded over total land area'

Additionally, the webinar will raise new issues for the four SDG-indicators.

AGENDA

(+++ presentation titles to be added later +++)

1. BKG and Statistics Portugal
 - Introduction to the session
2. Jerker Moström, Statistics Sweden & Hugo Poelman (DG REGIO)

- Output, findings and new ideas on SDG indicator 11.2.1
- 3. Eva Ivits, EEA
 - Outcome and findings on SDG indicator 11.3.1
- 4. Francisco Vala, Statistics Portugal
 - Outcome and findings on SDG indicator 15.1.1
- 5. Fabio Volpe, e-GEOS
 - Outcome and findings on SDG indicator 15.3.1

QUESTIONS FOR SLIDO FEEDBACK SURVEY

(+++Questions to be added later +++)
